Here's the wireframes. They're fairly straightforward with the sidebar placed at the bottom in the mobile view like we discussed. I only added one picture space in this wireframe as the variables of no image number requirement and no images picked out make it difficult to determine where any images would really go. And I don't want to add too many or it will just bog down the load time for the site.

I also didn't add any image slots for the footer link as the images the main Zen Garden page had were partly wrong and confusing anyway so I think the text approach many other designs had is a better choice to some degree. It's an option at the very least.

I also included examples of my chosen fonts. Segoe Print is a simple and slightly elegant font that I think would work well for headers. Meanwhile, Arial is a good, generic font that is easy to read and would make a good font for body text. Both fonts should come with Windows 10.

Here's the color palette. It's called Moody Sunset. I'm not sure if it's exactly perfect. It could maybe use a lighter blue and a sandy cream color in the mix but it's a good start.
